Comments:

Hawk Owl, Waxwing and **Two-barred Crossbill** breed in the area certain years, but can be totally absent other years.

Shorelark is a very rare breeding bird in the area, but can be found on the highest plateaus.

Only 3 Scandinavian mountain-species are not likely at all to be seen on this trip; These are **Red-throated Pipit, Little Bunting** and **Arctic Warbler**. They only breed in the extreme north of the Scandinavian mountain range.
